Code for Simulated Android App

```kotlin
@Target(AnnotationTarget.FUNCTION)

annotation class Composable

class MainActivity {

    fun onCreate() {

        println("Launching Greeting Card Simulation...")

        setContent {

            GreetingScreen("Ambika")

        }

    }

    private fun setContent(content: () -> Unit) {

        println("Setting up the content...")

        content()

    }

}

@Composable

fun GreetingScreen(name: String) {

    println("Hello $name! Welcome to your first Kotlin App!")

}

@Composable

fun AppTheme(content: () -> Unit) {

    println("Applying GreetingCard Theme...")

    content()

}

fun preview() {

    println("--- Preview Mode ---")

    GreetingScreen("Android Learner")
```

```kotlin
        println("--- End of Preview ---")
    }
    fun main() {
        println("========= Simulated Android App =========\n")
        val activity = MainActivity()
        activity.onCreate()
        println()
        AppTheme {
            GreetingScreen("Ambika")
        }
        println()
        preview()
        println("\n========= End of Simulation =========")
    }
```
